

# Portfolio Website — Build Documentation

Personal Portfolio Website Assignment

---

## 1. Candidate details

|         |                                                           |
|---------|-----------------------------------------------------------|
| Name    | Kartik Gupta                                              |
| SAP ID  | 590025981                                                 |
| Batch   | 5                                                         |
| Program | BTech CSE, 2nd year — Frontend Development specialisation |
| Date    | 09 September 2026                                         |

## 2. Template / starting point

The site was built from scratch (no third-party template or boilerplate). The structure, styling, and interactivity were written as plain HTML, CSS, and JavaScript with the help of an AI assistant, based directly on the assignment brief and my own content and photo.

## 3. AI tools used

**Claude (Anthropic), Sonnet 4.6** — used for the entire build: turning the assignment brief into a page structure, writing the HTML/CSS/JS, choosing a visual design (colour palette, typography, layout), writing the section copy based on the details I provided, generating this documentation, and preparing the download-documentation feature required by the brief.

## 4. Prompts used

The following prompts (reproduced as typed, including the source assignment PDF and my photo attached in the same conversation) were used to generate the site:

### Prompt 1 — brief + request:

```
"i have to make my porotfolio website using frontend development read above pdf to help make it better for me if need any detail ask me i will tell everything" (attached: Assignment_1_frontend_guide.pdf)
```

### Prompt 2 — personal details + photo:

```
"Name: Kartik Gupta. Sap id: 590025981. batch: 5. i am a btech cse student 2nd year, btech cse student specialisation core frontend development. know C language linux python dsa. had make ngo website human life foundation hlfjaiour.org. 100 days of c code, 100 days of dsa code upload on github https://github.com/Kartikg90. email kartikguptaa1912@gmail.com, https://github.com/Kartikg90, https://www.linkedin.com/in/kartik-gupta-2b4954317" (attached: profile photo)
```

## 5. Method / approach

- 1 Read the assignment PDF to extract the exact section and rubric requirements (Header/Nav, Hero, About, Projects x3, Contact, Footer, responsive layout, download-documentation button).
- 2 Shared my personal details, skills, existing projects (Human Life Foundation NGO site, 100 Days of C, 100 Days of DSA on GitHub) and a photo with the AI assistant.
- 3 The assistant proposed a colour palette, typography (Space Grotesk / Inter / JetBrains Mono) and a layout suited to a developer portfolio, then generated index.html, style.css and script.js.
- 4 Reviewed rendered screenshots of the desktop and mobile layouts to check spacing, contrast, and responsiveness, and adjusted the design before finalising.
- 5 Wired the footer "Download documentation" button to this PDF using a plain `<a href="documentation.pdf" download>` link, per the brief's suggested approach.
- 6 Tested the contact form (via FormSubmit), navigation links, and the mobile menu.
- 7 Prepared the files for upload to a public GitHub repository named index.html at the root, and enabled GitHub Pages under Settings → Pages.

## 6. Live link & repository

**Live site:** <https://Kartikg90.github.io/portfolio/> *(update after enabling GitHub Pages)*

**GitHub repository:** <https://github.com/Kartikg90/portfolio> *(update with actual repo name)*

**GitHub profile:** <https://github.com/Kartikg90>

**LinkedIn:** <https://www.linkedin.com/in/kartik-gupta-2b4954317>

**Email:** [kartikguptaa1912@gmail.com](mailto:kartikguptaa1912@gmail.com)
